

Hosted Sharepoint 3.0

Key Features and Benefits

Collaboration made easy

Windows SharePoint Services allows your staff to collaborate via the Web in order to share files and contact lists, store documents online, run blogs and wikis and more.

With hosted SharePoint, you simply pay a low per-user monthly fee and your staff benefits from all of the great collaboration tools SharePoint has to offer. We host the entire service for you. You'll also be provided with software and security updates as they become available.

What you get

By integrating with our hosted Exchange 2007, SharePoint 3.0 gives your employees an instant, powerful intranet. They can:

- **Store documents online.** Everyone works off a single, centrally-stored version of all documents, which can be easily opened using a hyperlink.
- **'Check out' files.** Lock documents while they are being edited, so nobody overwrites the work of others.
- **Run blogs and wikis.** All of your staff can stay in the loop.

Business benefits

The new features in SharePoint 3.0 provide better ease of use and even more functionality. Business benefits of SharePoint 3.0 include:

- **Tight integration.** Our SharePoint 2007 offering is architected to work closely with Exchange 2007. Microsoft has also designed SharePoint and Internet Explorer to link smoothly.
- **Improved functionality.** Better collaboration, portals, search, content management, administration and platform functionality.
- **40 application templates.** Microsoft's application templates for WSS 3.0 are available for your use with our service.
- **Enhanced security.** Including improved permissions, security groups and administration hierarchies.
